EDUCATION

- **SES' s R.C. Patel Inst. Of Technology** — Shirpur, India
  Engineering in Mechanical; — *June 2016 - June 2019*
  Courses:, Thermal Engineering, Artiftcial Intelligence, Machine Learning, Probability and Statistics,Deep Learning.

SKILLS SUMMARY

- **Languages** : Python, C, HTML, CSS, MATLAB, Embedded C, Arduino
- **Tools** : PyTorch, TensorFlow, Git, Numpy, Pandas, Matplotlib, Solid Modeling
- **Technical Skills**: CATIA Modeling, Deep learning, machine learning, natural language processing

PROJECTS

- **E-Differential** — Shirpur, India
  Team Head — *Mar 2018 - May 2019*
  - Worked with Arduino PLC and At Mega328P MCU to design and fabricate an E (for Electronic or Energetic) Differential. It was proposed by having an intension to replace M-Differential in current use to Electronic version of it.
  - Were able to build a scaled prototype of the proposed concept.
- **Design and Development of Accident Prevention System** — Shirpur, India
  Team Head — *Sept 2017 - May 2019*
  - Worked with Arduino PLC and At Mega328P MCU, RFID, Zig-bee to develop an Intelligent Accident Prevention System(IAPS). Planned to use Data Science for enhancing it' s usability and feature extractionary capacities.
  - Were able to build a scaled-down prototype of the proposed model.
- **SAE Mahindra BAJA 2018** — Shirpur, India
  Team Member, Steering Department. — *Jan 2017 - Jan 2018*
  - Worked with CATIA, ANSYS, MS-Project Management Tool to design and fabricate an ATV(All-Terrain Vehicle)
  - through our collegiate SAE club.
  - Were able to build a robust vehicle and successfully participated in competition.

EXPERIENCE

- **Titanic - ML from Disaster**: It is a Kaggle competition, wherein Survival rate was regressed for titanic ship datasets. I got 78.7817 % percentage correct prediction based on my model.
- **The Apriori Mall Association**: It followed the Customer Basket Analysis, where the closest and most relevant association of simultaneously purchased items was done along with their strong visual representation.
- **Mobile Sensor data Analysis using MATLAB**: It involves analyzing the data obtained from mobile sensors(acclerometors, gyros, sound, light, step counter, etc.(using SensorLab)) for analyzing and feature extraction during KPIT(Virtual Genesis).

CERTIFICATIONS

- Deep Learning A-Z from Udemy by Kirill Eremenko and Hadelin de Ponteves
- Machine Learning A-Z with Python from Udemy by Kirill Eremenko and Hadelin de Ponteves
- Python 3 Tutorial Course from Sololearn
- CATIA from IGTR, Aurangabad

HONORS AND AWARDS

- Ranked among top 100 teams for KPIT Sparkle 2018.
- Finalist in KBC NMU Aavishkar 2019 at University Level.
- 21st AIR in SAE Mahindra BAJA 2018.
- 4th and 6th Rank in Transfrom Maharashtra 2017 in Judges Criteria and People Choice (EGIT Solution)
